Capellades has carried out actions to improve the energy efficiency and security conditions at the Cinglera del Capelló.
Lighting has been adapted to energy efficiency and sustainability parameters, following the recommendations of an energy study carried out by the Barcelona Provincial Council.

BENITO NOVATILU's MILAN RGB floodlights were chosen for this project thanks to their high performance: high efficacy (up to 140 lm/W), double compartment, 4 groups of RGBW LEDs, independent dimming control for each colour through DMX-512 protocol and high resistance to 5G vibrations.
