Barcelona (Spain)

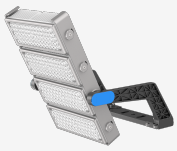
The football field at Les Masies de Voltregà (Barcelona) debuts APOLO L projectors, improving visibility during night matches and delivering high-performance lighting.

Apolo L
APAL



The football field at Les Masies de Voltregà (Barcelona) was in urgent need of an upgrade to its lighting system, as the old floodlights lacked sufficient power and failed to provide uniform light distribution, making visibility difficult during training sessions and evening matches.
The solution came with the **installation of APOLO L projectors,** a high-performance luminaire specifically designed for sports facilities.
The field is equipped with six lighting poles: three on each of the longer sides of the pitch. On the four poles located at the corners, three projectors have been installed per pole, while the central poles feature two projectors each. Thanks to its range of optics and power levels — from 500W to 1500W — the APOLO L perfectly adapts to the field's requirements, ensuring uniform and glare-free illumination. It also includes DALI control and a centralized watertight connection box, making both installation and system management easier.

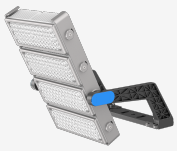
APAL



At the Esportivo Banyoles Club (Girona), the installation of Apolo M projectors with OnField control has been carried out.

Each of the 4 towers on the football field is now equipped with six or eight Apolo M projectors. These projectors are efficiently managed through the OnField remote control system, which allows for adjusting the on/off and light intensity. Additionally, through a mobile application, it is possible to program specific functions such as training sessions or lighting of the midfield, among others.

The Apolo M projectors offer a variety of sizes and powers, with high efficiency and robustness, suitable for large sports spaces like football fields.
