Sant Martí de Centelles (Spain)

Inoova B light points by BENITO in the new car park of Sant Martí de Centelles.

The Innova B luminaire is one of BENITO's top products. It is a luminaire suitable for urban residential environments. About twenty units have been installed in the new parking lot located next to the C-17, in Sant Martí de Centelles, Barcelona.

With power ranging from 20 to 100 W, it has a great thermal dissipation capacity and it is very robust. It increases safety in a parking lot that provides access to the railway station.

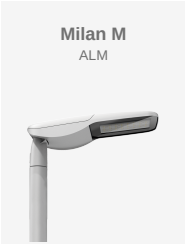
Ulldecona (Spain)

The City Council of Ulldecona chooses the Milan and Innova luminaires to ensure an adequate lighting of the municipality.



The municipality of Ulldecona is located in the province of Tarragona, at the border with the Valencian Community.

With the aim of ensuring the correct lighting of the town, the City Council chose two types of luminaires: Milan and Innova.

Being rather functional, the **Milan luminaires** were installed in road areas. This product is characterised by its flat and aerodynamic design, as well as its extensive light distributions, which make it able to cover all kinds of needs. Moreover, this model is very efficient and can be opened without tools, thus facilitating its maintenance.

For residential areas, the City Council opted for the **Innova B** model as its modern and innovative aesthetic make it ideal for different environments. This luminaire has a great thermal dissipation capacity and includes the tool-less opening.
