Need / Issue: The environment required rest areas integrated into the existing urban and landscaped surroundings.
Solution: Installation of Benito Design+ furniture in olive green to reinforce the identity and aesthetic quality of the space.
Result: A more comfortable, coherent environment connected to urban greenery is created.
Finale Ligure, **located on the Ligurian coast of Italy,** is a town renowned for its tourist activity, Mediterranean climate, and network of pedestrian streets where urban life mainly takes place outdoors. In this context, an urban intervention focused on creating small rest areas integrated into the city landscape has been carried out.
The intervention incorporates **ARNE chairs and FLO litter bins with cover, both belonging to the Benito Design+** range and entirely finished in olive green. Their contemporary design brings a more refined and aesthetic image to the urban space while reinforcing integration with the vegetation and natural pergolas present along the pedestrian route.
The rest areas are strategically distributed under shaded zones, creating more comfortable and peaceful spaces for residents and visitors. **The result is an intervention combining design, landscape and functionality to enhance the welcoming Mediterranean character of the environment.**

Need / Issue: The furniture required renovation to improve its functionality and durability in a marine environment.
Solution: Replacement of urban furniture with more resistant and suitable solutions.
Result: The quality of the space, its durability, and the user experience for all ages are improved.

At **Passeig del Mar in Palamós,** the urban furniture has been renovated, adapting the space to current needs. It is one of the town's main axes, with thousands of users throughout the year, especially during the tourist season.
The intervention **includes ARKO benches from the Benito Design+ range, together with FLO litter bins from the same collection,** providing a contemporary and cohesive image along the promenade.
The intervention reinforces the recreational and social character of the seafront promenade, offering a more attractive, durable space prepared for intensive year-round use.
