BENITO
–Street Lighting

Fuerteventura (Spain)

Lighting and signage of pedestrian crossings in Fuerteventura, Canary Islands, with the aim of preventing run-overs and increasing the users' safety.

Fuerteventura has decided to reduce the accident rate of the island. To achieve this goal, it has opted to increase the visibility of the pedestrian crossings, thus avoiding possible run-overs.

Thanks to the installation of **Zebra light points** in both directions, people's safety is reinforced as they do not remain in the dark. Moreover, the light is focused on the pedestrian so drivers are not blinded by it.

Finally, each light point has its own luminous **crossing sign** to enhance the visibility of the pedestrian crossing, both at daylight and night.
