Cunit has incorporated TRAX shelters from the Benito DESIGN+ collection with side laminated panels, a design solution available in different sizes that delivers functionality, durability, and quality.

TRAX
MAD14

Cunit has embraced urban design in the newly developed area in front of the Pompeu Fabra Public School and the Cunit Health Centre, **where TRAX bus shelters from the Benito DESIGN+ collection** have been installed to complete the setting with a functional solution of high aesthetic value.
The **TRAX shelter,** available in different sizes to adapt to the needs of each space, corresponds in this project to **the MAD14 model with laminated glass side enclosure.** It is **manufactured from steel treated using the Ferrus process,** a triple-protection system that ensures optimal resistance to corrosion, even in demanding outdoor environments.
It incorporates a **hardwood bench treated with protective oil,** providing comfort and warmth to the ensemble, as well as laminated glass throughout the structure, ensuring safety, durability, and visual transparency.
The result is a contemporary infrastructure that combines design, strength, and functionality, integrating coherently into the public space and enhancing both the quality of the urban environment and the experience of public transport users.
