Need / Problem: The space required a complete, safe and attractive children's area, integrated into a city that promotes urban re-naturalization and outdoor living.
Solution: Installation of children's play equipment, sustainable Street Furniture , Litter Bins and lighting to create a functional and accessible environment.
Result: A more active, comfortable space for play, meeting, and leisure is created, connected to Viladecans' green city model.
In Viladecans (Barcelona), BENITO URBAN has participated in the creation of a new children's play and recreation area, incorporating solutions designed to encourage play, social interaction, and the everyday use of public space.
The play area integrates a Three-Dimensional Net **CUAT** , along with games from the **BERNA** line such as **Sauda** , **Forde,** and **Ornes** , offering different routes, motor challenges, and play experiences adapted to different ages.
The installation is completed with **Citizen ECO** Benches , made from recycled and recyclable materials, and **GEA** Litter Bins , which help keep the space clean and tidy. In addition, the installation incorporates **Milan S** Floodlights , improving illumination and promoting safer use during periods of low light.
A project that combines play, sustainability, comfort, and lighting to enhance the quality of public space and support Viladecans' commitment to a greener and more livable city.

To date, the street lighting of the promenade was composed of mercury-vapor lamps. Both the energy and luminous efficacy were very deficient as a result of a high consumption and low level of luminous uniformity.

The renovation of the lighting consisted in replacing the existing lamps by 3.9 meter-high poles and 20W Milan S LED luminaires with movement sensors so that they only turn on when someone passes by.

The poles have been placed on the side surrounding the houses and facing the sea, thus avoiding causing a nuisance to neighbours, and creating an efficient and well-lit promenade as it is one of the most popular spots among inhabitants and tourists.
