Lanzarote (Spain)

The maritime promenades of Lanzarote, equipped with functional and design solutions for the selective collection of the different types of waste.

Doria
PA686

The respect of the environment is gaining more and more importance, even among municipalities. Many of them have already implemented selective collection to promote recycling and reaffirm its commitment to the environment.

To face this challenge, Lanzarote has decided to install **Doria bins** made of reinforced steel sheet with a stainless steel lid on its seafront promenades.

It is a **large-capacity product with three different compartments** and a central ashtray. Each compartment is indicated by a colour and pictogram, besides having its own fixing system for bags up to 75 litres.
