# Tourism and Heritage

Making historic and heritage concepts from our environment known is part of a good cultural management.

Benito Novatilu offers tailored solutions to integrate the different elements to any environment.

Documentation, text writing, photographic and cartographic selection. Graphic design. Manufacture of treated wood supports and big format printing. Installation of signage elements.

The tourism sector is moving towards a quality tourism and focusing on meeting the demand of both the user and the city itself. We offer a large range of products to provide solutions to these needs by collaborating directly with the managers of each tourism project.

# Thematic

We also develop signage actions in all kinds of environment.

This kind of signage consists of a series of unified sets in terms of construction as well as graphics in order to ensure the visual coherence of the project and make it more effective from a communication point of view.

Our internal team designs the content

following the customer's guidelines.

AMB breakwater landmark sign

The beaches of the Metropolitan Area of Barcelona (AMB) extend along the 42km of the coastline. There are 41 beaches in total and their length reaches 30km: Barcelona, Badalona, Gavà, Castelldefels, Sant Adrià de Besòs, El Prat de Llobregat, Montgat and Viladecans.

Last year, AMB invested in new signage elements. Benito Novatilu manufactured and installed 204 information signs, 8 directional signs, 40 warning signs and 52 flag signs so that visitors benefit from complete and reliable information about the beach.

Signage

# Environmental

Benito Novatilu has an extensive experience creating routes in natural environments.

Natural spaces offer great possibilities of travelling around our territory and discover the most characteristic natural elements of each area.

Our products integrate in the environment and respect it.

Signage

# Directional

The modular sign system adapts to every installation.

Its functionality results from its simplicity, which guarantees visitors effective and precise information.

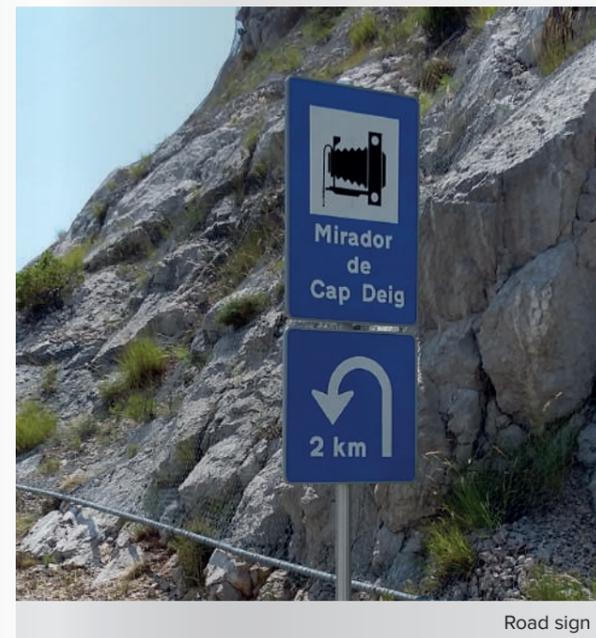

We have a large range of panel signs, both open and closed-back, which meet the signage needs of our cities.

Aluminium profiles are based on a 25mm and 35mm standard modular sign.

Aluminium supports of different diameters can be either adjustable or fixed.

# Urban

Signage of internal areas of urban centres such as children's playgrounds, school paths and healthy circuits foster physical activity and children's personal autonomy while decreasing private vehicle usage as well as pollution.

On the other hand, external areas such as industrial estates, housing developments and farms require an effective signage because of their location in order to facilitate road traffic and their quick localisation.

# Signage Road

Signs made in a single anodised and folded aluminium piece, thus forming a 90° peripheral flange.

The back anchoring sliding rail system in the basis of the signs is made by means of a mechanic-welded process instead of gluing. This gives more resistance to the unit.

A thermosetting coating made of polyester resin highly resistant to UV rays is applied on the back of the signs.

This characteristic alongside the adequate pre-treatment makes them

ideal for outdoor applications.
