Need / Issue: The space required renovation to improve the play experience while maintaining integration with the natural landscape.
Solution: Installation of new play and rest elements made from robinia wood.
Result: A more natural, attractive park adapted to family use is created.
In **El Bruc,** a municipality of approximately 2,000 inhabitants located in a privileged natural setting at the foot of Montserrat, in the province of Barcelona, the Parc del Torrent de l'Illa playground has been renovated.
The intervention focuses **on elements made from robinia wood,** a material especially suitable for outdoor use due to its durability and its ability to integrate visually into natural environments.
The park includes **a relaxation hammock, a round swing with five seats, a balance circuit and a climbing structure,** offering different play experiences adapted to various age groups.
The project reinforces the natural character of the space and transforms the park into a family meeting point where play, relaxation and nature coexist in balance.
