We have developed a major children's play area project in the town of Aljaraque (Huelva), creating a vibrant, colorful, and fun urban space for young children. This project includes two playgrounds designed for different age groups: one for children under 6 years old and another for those aged 6 to 12, promoting safe and age-appropriate play.

Both areas are equipped with various play elements from Benito Urban's MODUS range, including a MODUS L and XXL modular play structure, a COSMIC carousel, a mixed curved swing, a climbing element, a square trampoline, and colored cast benches that complete the space. The use of multicolored shock-absorbing flooring and decorative fencing transforms this site into a joyful and safe environment, perfectly integrated into the urban fabric of Aljaraque.

El Perelló (Valencia) is already enjoying its long-awaited children's playground, located in Calle Crevillent, next to the sports centre.

El Perelló recently opened a play and recreational area with games for different ages.

It is intended to give a more specific use to this space focusing on children, who do not have their own recreational spaces in this area. It contains slides, see-saws, swings and huts for children to interact with each other.

In addition to the playground equipment, rubber paving, benches and fencing have been installed, giving El Perelló a new area for families to enjoy.

Renovation of the lighting in a private sports club, creation of rest areas with street furniture, renovation of the playground area and installation of sports equipment.

The sports club of Tona, a municipality located in the province of Barcelona, has decided to invest in the renovation of its lighting and street furniture.

To begin with, the luminaires and floodlights were replaced by the **Milan** models., thus ensuring all the club is properly lit, especially the several tennis and paddle courts.

Citizen Eco, **Oslo** and **Volga** benches as well as **Das** and **Esférica** planters were chosen to create rest areas and give personality to the club.

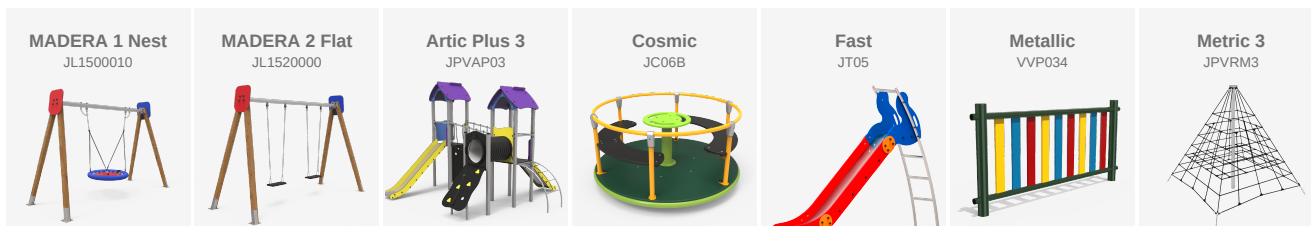

Finally, the playground area was also renovated by installing a **Cosmic carousel**, an **Alu 4 modular set** and a **Futtoc table**.

Project carried out in the Pajaritos neighbourhood including a playground and a fitness area, which has resulted in a substantial improvement for the environment.

The connection of the **Camino de Ronda** with the neighbourhoods of **Pajaritos** and **La Caleta** has become a reality. The city Council has completed the regeneration and reorganisation works of the 23,000 m2 space that was occupied by the old military motoring barracks. The area, known as **Parque Automovilístico**, is located in the Pajaritos neighbourhood, specifically on Alondra Street, very close to the high-speed train station. The urbanisation of this land, which had been abandoned for many years, has meant a significant improvement for its surroundings, since in addition to the development of the road, the project has contemplated the creation of a green area of more than 10,000 m2 as well as a **playground and fitness areas**.

Thanks to BENITO, the dam of Muel benefits from a new urban space where children can learn the history of their city with complete security and pure fun.

The **City Council of Muel**, located in the province of Zaragoza (Aragon), contacted the Group BENITO NOVATILU to create a new playground area while preserving the history of the area where it would be installed.

The project took place near the Roman dam, location that represented a great challenge for the Group because of its historical nature.

The aim of the project was to achieve a balance between local history and the innovative playground equipment from the Group BENITO NOVATILU in order to create leisure spaces for all ages by using products that integrate to the environment.

After conducting several studies of the area and developing the technical blueprint of the park, in compliance with the current safety regulations, the **BOSCO 4**, 100% designed by the Group BENITO NOVATILU was chosen as the main element. This product consists of a multi-level tower with platforms, slides installed at different heights, vertical panels and great challenges which stimulate the strength, coordination and balance of children, in compliance with the European safety standard EN1176. Moreover, it is made with maintenance-free materials resistant to bad weather conditions and vandalism, and its design recalls tree houses, which makes it ideal for natural as well as urban environments.

Other products were also installed: **swings JL15**, **spring swings JFS10**, a **dynamic element JPV413** which includes several features such as a moving bridge, and the **swivelling element JC06**.
