Barcelona is one of the cities that is strongly promoting sustainable mobility. In recent years, there has been an increase in bicycle usage, and new bike lanes have been installed on Gran Vía and Vía Augusta.

Recycled PVC Drop separators, Mai bollards, and universal bicycle racks have been installed on both streets.

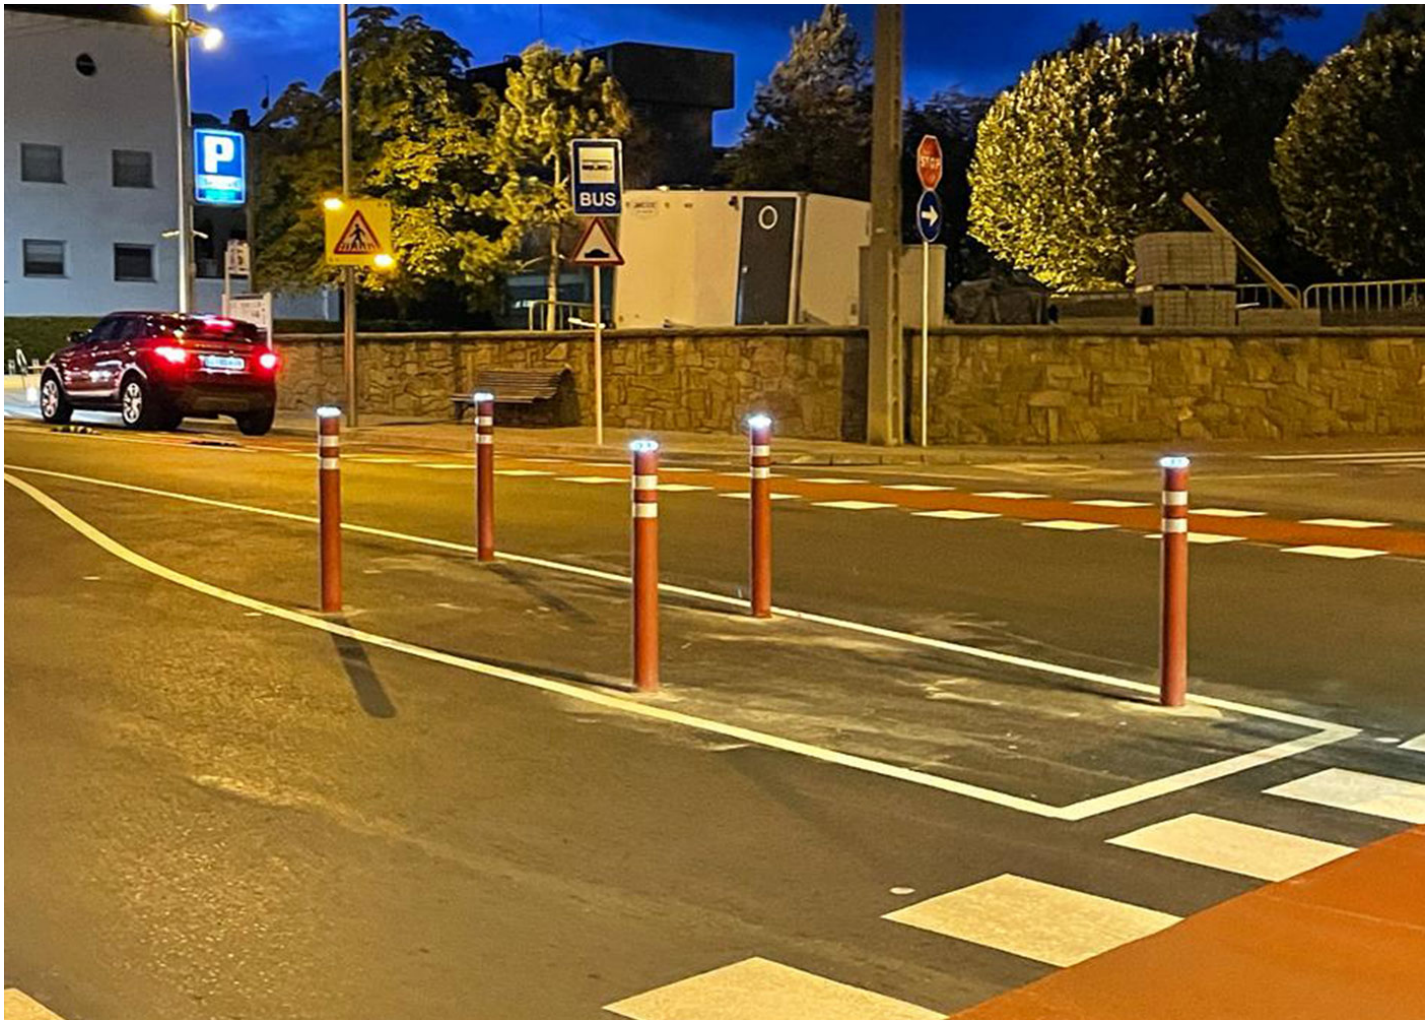
Vic (Spain)

Project carrie dout on pedestrian crossings where Solar LED flexible bollards have been installed to increase the safety of pedestrians by warning drivers of their presence.



Maia
H214ZR

The City Council of Vic has finished the installation of flickering luminous flexible bollards with LED technology in the pedestrian crossings of the main road as it is where levels of traffic are higher.

This measure aims at increasing the safety of pedestrians by warning drivers of the presence of pedestrian crossings in hours of low visibility.

Located in the province of Barcelona, Gurb is one of the many municipalities that has decided to invest in infrastructures for sustainable mobility.

The first step was to create cycle lanes so that bicycle riders could move around the town in complete safety. These have been complemented with diverse BENITO products.

The **Gota cycle lane separator** is intended to impede motor vehicles from invading lanes and the **Maia bollard** aims at ensuring their good visibility in sensitive areas such as curves.

Finally, **Universal bike racks** have also been installed so that users can park and secure their bikes and scooters easily.

Barcelona is becoming a reference when it comes to the application of urban solutions.
Most sections of the city cycle lane are already equipped with Gota separators. Moreover, the installation is usually complemented with the beaconing of the extremities thanks to the flexible bollard Maia, which is maroon and includes to reflective strips to bring visibility and elegance.
Finally, other sections are equipped with the corresponding signage and the Biki maintenance station for bicycles.
