Fusta 60
ICFU601A

The municipality of Bustillo de la Vega is located in the province of Palencia, in a rural environment.
Even if the main objective of the City Council was to improve the energy efficacy of the lighting, they were also looking for a product that would harmonise with the space. For this reason, they chose the Fusta light point.

This product is ideal for natural areas as it consist of a shaft made of tropical wood and a galvanised steel base with a forge black textured polyurethane coating, which gives it a rustic yet sophisticated appearance.

To complete the light point, high-efficiency Camprodon luminaires were chosen. They stand out thanks to their original dome-shaped design, perfect for historical and rural areas, and that has the same finish than the base of the pole, thus contributing to highlighting the elegance of the product.
