

The DALIA Beacon is a highly efficient product designed for lighting and marking paths, parks and pedestrian zones.

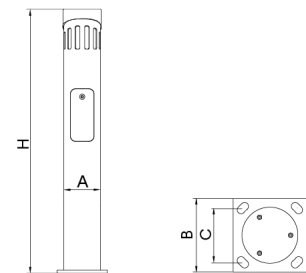

Highlights among its main features are its mechanical robustness and its resistance to corrosion.

It is made from hot galvanised steel, with the surfaces coated with epoxy primer and then painted with oven-cured black oxiron polyester.

The top cover is bright polished stainless steel, making it highly attractive. The diffuser is in glazed methacrylate, making the light very uniform. The optical block is built into the Beacon itself to form an integrated unit.

It is designed to be easy to maintain, featuring an inspection door in accordance with EN40 and low-voltage electrical regulations, making it easy to change the bulb simply by removing the stainless steel cover on the top.

Fitting: 4 bolts M16. Optional: LED Dalia Beacon IBDAL100LED.
