Barcelona (Spain)

Renovation of Parc del Torrent de l'Illa in El Bruc (Barcelona) with robinia playground elements integrated into the natural environment, creating a recreational and relaxation space surrounded by nature.

Need / Issue: The space required renovation to improve the play experience while maintaining integration with the natural landscape.
Solution: Installation of new play and rest elements made from robinia wood.
Result: A more natural, attractive park adapted to family use is created.
In **El Bruc,** a municipality of approximately 2,000 inhabitants located in a privileged natural setting at the foot of Montserrat, in the province of Barcelona, the Parc del Torrent de l'Illa playground has been renovated.
The intervention focuses **on elements made from robinia wood,** a material especially suitable for outdoor use due to its durability and its ability to integrate visually into natural environments.
The park includes **a relaxation hammock, a round swing with five seats, a balance circuit and a climbing structure,** offering different play experiences adapted to various age groups.
The project reinforces the natural character of the space and transforms the park into a family meeting point where play, relaxation and nature coexist in balance.

JROY116

The transformation of the **Jardines de la Huerta de San Bertran,** in **Barcelona's** Poble-sec neighborhood, has been completed. This February, the Robinia park was inaugurated, designed for the enjoyment of the entire community.

The space features a set of 'Mikado' Robinia logs, perfect for improving balance and motor skills in young children. Additionally, it includes a modular play structure with a slide, a hammock for relaxation, and trampolines that add an extra touch of fun. On one of the platforms in the park, there is a custom ROY balance set, ideal for improving coordination, and a nest swing.
Designed as an open and people-centered environment, the park invites children to play and explore in a safe and natural setting, while adults can relax and enjoy the green surroundings.
The existing Mediterranean vegetation, consisting of pines and holm oaks, has been preserved and enhanced with new trees such as cypresses, camellias, and flowering pear trees, along with renewed shrub and herbaceous vegetation.
This intervention reaffirms the commitment to sustainable and accessible urban planning, promoting coexistence and well-being in the neighborhood and the city.
