**Need / Problem:** The residential development required new safety, organisation and urban furniture elements adapted to the growth and everyday use of public space.

**Solution:** Installation of road safety systems, urban furniture and separation and access control elements.

**Result:** Improved organisation, safety and comfort within a rapidly evolving urban environment.

**Furjan Island is part of one of Dubai's new residential developments**, conceived as a modern urban environment where architecture, mobility and public space coexist within a context of continuous growth and high urban quality.

As part of this renewal process, several **urban elements have been installed in front of Arbor School** to improve safety and functionality in the area. The intervention includes **Ensanche fence** to separate traffic lanes, **semi-automatic bollards with reflective bands** and **stainless steel bollards** for pedestrian traffic control and protection.

The space is completed with **FLO three-compartment litter bins** equipped with a canopy and integrated ashtray, promoting waste separation and easier maintenance of the surroundings. **Roda benches** have also been installed, creating seating and resting areas for users and visitors. An intervention that combines safety, design and urban equipment within a constantly evolving residential development.
