The municipality of Ulldecona is located in the province of Tarragona, at the border with the Valencian Community.

With the aim of ensuring the correct lighting of the town, the City Council chose two types of luminaires: Milan and Innova.

Being rather functional, the **Milan luminaires** were installed in road areas. This product is characterised by its flat and aerodynamic design, as well as its extensive light distributions, which make it able to cover all kinds of needs. Moreover, this model is very efficient and can be opened without tools, thus facilitating its maintenance.

For residential areas, the City Council opted for the **Innova B** model as its modern and innovative aesthetic make it ideal for different environments. This luminaire has a great thermal dissipation capacity and includes the tool-less opening.

The City Council of Ses Salines instals efficient, low-consumption Milan LED luminaires with movement sensors in the Colònia de Sant Jordi promenade.

**Milan S 40**
ALMS40

**Oslo**
ICNI36

To date, the street lighting of the promenade was composed of mercury-vapor lamps. Both the energy and luminous efficacy were very deficient as a result of a high consumption and low level of luminous uniformity.

The renovation of the lighting consisted in replacing the existing lamps by 3.9 meter-high poles and 20W Milan S LED luminaires with movement sensors so that they only turn on when someone passes by.

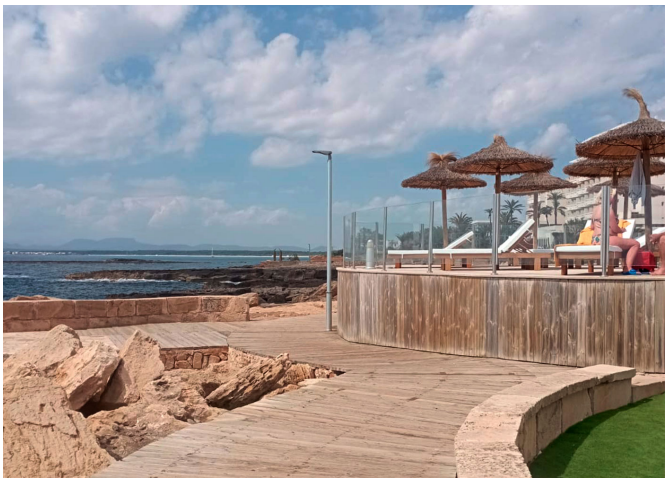

The poles have been placed on the side surrounding the houses and facing the sea, thus avoiding causing a nuisance to neighbours, and creating an efficient and well-lit promenade as it is one of the most popular spots among inhabitants and tourists.

|  |  |  |  |  |

More precisely, the products installed are Kube tables (UM372M), made of precast textured granite white concrete, and matching Kube bins (PA672).
Citizen luminaires (ILCZ0) were also installed. This product outstands for its design as well as an excellent relation between efficiency and cost. It is ideal for all kinds of residential areas thanks to its extensive optical and light distributions.
