SQUARE 100m2
JGV100

Need / Problem: The environment of the new library required a safe, inclusive children's space connected with nearby public facilities.
Solution: Creation of a children's park with ALU games, themed climbing wall, Shade Areas , furniture and elements made with sustainable materials.
Result: A new family meeting point is created, integrated with the library, the municipal school, and the Cycle Lane .
In Santa Cristina d'Aro (Girona) the new **Library Park** has been inaugurated, located next to the new municipal library, between Joan Casas i Arxer and Pere Geronès streets.
The park incorporates children's play equipment from the **ALU** line, such as **ALU 6** and **ALU 7** , along with multi-play elements, an adapted Swing , and inclusive Springs swings , creating a space designed for different ages and abilities.
One of the most unique elements of the project is the **climbing wall inspired by Pedralta** , a natural and scenic symbol of the municipality, which reinforces the local identity of the space.
The project is completed with **geotextile fabrics** to create shade, native vegetation, a **Corc** fountain , **Picco ReBnew** Litter Bins , and fencing made from ReBnew material, providing sustainability, safety, and comfort.
The result is an inclusive, functional park, connected to its surroundings, designed to support the daily lives of children and families.

Installation of textile shade sails in Plaça Joan Pelegrí (Barcelona), creating shaded areas and thermal comfort through lightweight structures and permeable materials that enhance ventilation.

SQUARE 100m2
JGV100

In **Plaça Joan Pelegrí, in the Sants-Montjuïc district of Barcelona, square textile shade sails have been installed to improve the climatic comfort of the public space.**
These lightweight structures, supported by posts anchored with concrete bases, create large shaded areas that encourage the use of the square during the warmest months. The system **uses micro-perforated HDPE fabric,** allowing air to pass through and improving ventilation while preventing heat accumulation beneath the tensioned surfaces.
The arrangement of **the sails creates a dynamic interplay of shadows that, beyond their climatic function, adds aesthetic value to the urban setting.** Beneath these structures, seating areas with benches and play zones are located, consolidating the space as a meeting point for residents and users.
A simple yet effective intervention that combines design, functionality, and climate adaptation to improve the livability of public space.

The renovation of the **Parque de las Naciones in Torrevieja, Alicante,** has transformed this public space into a more accessible and attractive environment, especially for younger children. With the goal of optimizing the outdoor experience, **new modular play equipment, spring toys, rocking horses, and swings have been installed,** designed to meet the varying ages and needs of children. These play elements encourage physical activity and enjoyment, offering a fun and safe experience.

In addition, visitor comfort has been a priority, especially during the intense summer heat in the region. To address this, **shaded areas in rectangular and triangular shapes have been added,** providing relief from the sun and creating pleasant spaces for families. The landscape design has also been updated, with more green spaces and rest areas, making the park an ideal place for recreation and social gatherings in a natural setting.
