Need / Issue: The area required an efficient, sustainable lighting solution resistant to demanding environmental conditions.
Solution: Installation of SIENA columns with hybrid MILAN SOLAR 30W luminaires and urban furniture made from recycled material.
Result: Improved lighting quality, energy efficiency, and public space comfort.
On Buen Pastor Street **in San Fernando (Cádiz),** the urban lighting system has been renovated through the installation **of more than 85 SIENA columns equipped with hybrid MILAN SOLAR 30W luminaires.**
These luminaires operate **with autonomous hybrid technology,** reducing dependence on the electrical grid thanks to durable, high-autonomy LiFePO4 batteries. They also integrate a presence sensor and programmable charge controller, enabling smart lighting management and optimising energy consumption according to real environmental needs.
The intervention is complemented **by Citizen ECO benches and GEA litter bins,** manufactured with **100% recyclable ReBnew material.** Installed along the promenade, they create rest areas and contribute to space maintenance, offering high resistance to salinity and weather conditions, especially suitable for maritime environments.
A project combining technology, sustainability, and durability to modernise urban space.
