Barcelona-El Prat Airport

Installation of Defender security bollards at Barcelona-El Prat Airport, designed to enhance protection and access control in the main entrance area of the airport, ensuring greater safety for users.

We have carried out the installation of DEFENDER security bollards at Barcelona-El Prat Airport, an environment where safety is a top priority to protect both people and critical infrastructure. In an area with a constant flow of vehicles and pedestrians, it is essential to have systems that ensure access control and prevent incidents.
Our DEFENDER bollard, certified under the ASTM 2656M-23 standard and M50 Applus approved, has proven its ability to stop a 6,800 kg vehicle at 80 km/h, achieving the highest security classification. Its robust and reliable design, together with efficient hydraulic and electrical operation, enables fast and safe traffic management.
With this project, we at Benito Urban reaffirm our commitment to certified security and the development of innovative urban solutions that protect access to strategic infrastructures and help create safer and more resilient urban environments.
