## -Street Lighting

## Barcelona (Spain)

The Ronda Litoral of Barcelona installs LED beacons, creating minimally intrusive and environmentally friendly lighting, and improving the visibility of the area in order to increase road safety.

Tomsk  
ABLTM

The steel Tomsk beacon is one of the recommended products in the sector of beacons for urbanised areas. They can be combined with the Tomsk light fixture in a variety of ways. In the case of the Ronda Litoral, they have been installed on both pavements to provide better lighting for passers-by.

The light they give off provides good visibility of the surroundings without being intrusive.
