Ecological grate made of recycled plastic for Seville's trees.

Ecológico
A50

The City Council of Seville has a Master Plan for Trees aiming at preserving the city's trees. 508 grates were damaged, 425 of them were made of cobblestones and the rest were metallic, which can harm the tree. Therefore, the Park and Garden Service decided to change them.

Benito has installed its new ecological tree grates made of ReBnew, the high-quality recycled plastic which is also 100% recyclable and reusable. The advantage of this material is that it meets all the requirements of the City Council as it is waterproof, resistant to sunrays and contains no pollutants. It can be cut to adapt it to the dimensions of each tree and it lets grass grow freely.
