Need / Issue: The space did not encourage pedestrian use or stay, limiting its potential as a meeting point.
Solution: Pedestrianisation and incorporation of lighting, furniture, and spatial organisation elements.
Result: A more accessible, organised square focused on public use is created.

In **Sallent de Gállego (Huesca),** the town square has been renovated, transforming it into a space designed for people and everyday use. The intervention **includes TOMSK light points in L and T configurations,** ensuring efficient lighting integrated into the surroundings. The space is equipped **with ARQ benches,** with and without backrests, allowing different ways of use and stay.
In addition, **ARVELO bike racks** have been installed, promoting sustainable mobility, and the space has been defined with bollards with flat bars, improving organisation and safety. The intervention is completed **with OLEA planters,** adding vegetation and reinforcing integration.
The result is a more balanced space, where people can relax, meet, and enjoy the surroundings in a well-designed and accessible environment.

Lugo (Spain)

Installation of Olea planters with corten steel finish in the port of Ribadeo (Lugo), enhancing the aesthetics and functionality of the space, blending in seamlessly with the maritime environment.

The installation of **Olea planters with corten steel finish** in the port of Ribadeo, in Lugo, focuses on enhancing the aesthetics and functionality of the port area. Designed to endure over time without any maintenance, this choice is due to its resistance to weather conditions and its attractive rusted patina, which blends in perfectly with the maritime environment. It requires no finishing, avoids polluting processes, and contributes to environmental sustainability.
The project's objectives include improving the port's aesthetics by incorporating modern and elegant planters that complement the natural landscape and port facilities; enhancing the functionality of the space by delineating areas, guiding pedestrian traffic, and providing green spaces that contribute to the well-being of visitors and workers; and ensuring long-term sustainability through the use of durable, low-maintenance materials.
With this project, the aim is to make the port of Ribadeo a more welcoming and visually appealing space, benefiting both the local community and visitors.
