El Perelló recently opened a play and recreational area with games for different ages.

It is intended to give a more specific use to this space focusing on children, who do not have their own recreational spaces in this area. It contains slides, see-saws, swings and huts for children to interact with each other.

In addition to the playground equipment, rubber paving, benches and fencing have been installed, giving El Perelló a new area for families to enjoy.

Mancha Real, a municipality with a long olive growing tradition located 19 km away from Jaén, is one of the most important industrial hubs of the province.

Recently, the municipality has decided to create new spaces where children can play and develop new abilities. To achieve this, it called on BENITO which supplied the playground equipment and paving.

The inclusive multigame elements with slides and panels are from the **Alu range**, which is characterised by its vivid colours and zero maintenance. We can also find **Julián and Barco spring swings**, designed by Mariscal, and a **Curvo swing**.

However, the element that stands out the most is, without any doubt, the rubber flooring. It has very attractive and eye-catching colours and, on top of that, this surface has also been used to add even more playability to the playground as it includes the design of a hopscotch and twister.
