Need / Problem: The residential development required new safety, organisation and urban furniture elements adapted to the growth and everyday use of public space.
Solution: Installation of road safety systems, urban furniture and separation and access control elements.
Result: Improved organisation, safety and comfort within a rapidly evolving urban environment.
Furjan Island is part of one of Dubai's new residential developments, conceived as a modern urban environment where architecture, mobility and public space coexist within a context of continuous growth and high urban quality.
As part of this renewal process, several **urban elements have been installed in front of Arbor School** to improve safety and functionality in the area. The intervention includes **Ensanche fence** to separate traffic lanes, **semi-automatic bollards with reflective bands** and **stainless steel bollards** for pedestrian traffic control and protection.
The space is completed with **FLO three-compartment litter bins** equipped with a canopy and integrated ashtray, promoting waste separation and easier maintenance of the surroundings. **Roda benches** have also been installed, creating seating and resting areas for users and visitors.
An intervention that combines safety, design and urban equipment within a constantly evolving residential development.
