In London, **Goteborg benches and automatic telescopic bollards** have been installed, offering innovative solutions that improve both functionality and urban design. **The Goteborg benches**, made from treated tropical wood and coated with a triple layer of Lignus, provide a modern and durable aesthetic, suitable for any public space. This coating includes a fungicidal, insecticidal, and water-repellent protector, ensuring resistance to weather conditions.
Additionally, **Plaza automatic telescopic bollards** have been incorporated to facilitate access control in the city's parking areas. These bollards, made of AISI-304 stainless steel and equipped with red/green LED signaling, enable efficient traffic management and enhance security. Their remote control operation and metal mass detectors provide additional control for restricted areas.
These solutions not only improve security but also optimize the design of public spaces, making London a more functional and safer city.

Nanterre is a town with an important financial center as it houses part of the La Defense district, located in the northwest extension of the Champs Elysees in Paris. In one of its parks, BENITO has installed 33 units of the blue Goteborg bench.
#INTROPDF##
This model is made of tropical wood treated with Lignus, a fungicidal, insecticidal, and water-repellent protector. It is ideal for garden areas and, in this case, it adds a touch of colour to the park.
