Some of the projects we have done

Geovelas, both square and triangular, have been installed in Plaza de Somorrotro in Segovia to provide greater protection during the summer to the Berna children's playground.

Segovia (Spain)

El Perelló (Valencia) is already enjoying its long-awaited children’s playground, located in Calle Crevillent, next to the sports centre.

Valencia (España)

Climate change is one of the main concerns for local governments, as it directly affects the daily lives of citizens, especially during the summer months due to high temperatures. In this context, **Plaza de Somorrotro** in Segovia has been renovated with the goal of creating a more comfortable and safe space for children. The **LUX** element from the **Berna** line and the **ROKO02** climbing element have been installed in the children's playground, designed to promote physical activity and motor skill development.

To counteract the heat, **geovelas** have been incorporated, which are shade solutions with **textile architecture**. These tensioned structures are perfect for fully or partially covering any type of outdoor space, creating cool and shaded environments. Benito's **geovelas** are the ideal solution to transform any area into a safer and more comfortable environment. Designed with high-quality materials, they adapt to projects of all sizes and styles, offering unique benefits and improving user experience.

At Benito, we offer **customized shade solutions**, like in this project, ensuring a fresh and safe environment for everyone.

El Perelló recently opened a play and recreational area with games for different ages.

It is intended to give a more specific use to this space focusing on children, who do not have their own recreational spaces in this area. It contains slides, see-saws, swings and huts for children to interact with each other.

In addition to the playground equipment, rubber paving, benches and fencing have been installed, giving El Perelló a new area for families to enjoy.
