Regulations and certifications:

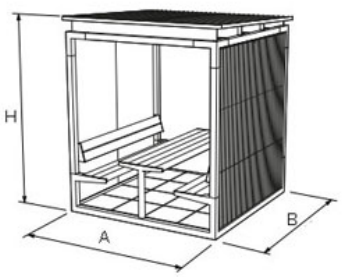

ISO 9001 · ISO 50001 · ISO 14001 · ISO 45001

A 6x2 meter climate-controlled shelter, ideal for any type of leisure area. It consists of two Tables and six Benches , two of which are located outside the canopy. Its robust wooden structure is reinforced with steel joints treated with the FERRUS protective process and features a wrought iron black finish that guarantees high resistance and durability against inclement weather. A perfect solution for projects that efficiently combine functionality and design.

Materials & Finishes:

Steel with a hot-dip galvanizing treatment to protect it from corrosion. Our galvanizing process complies with the UNE EN ISO 1461:2009 standard and involves immersion in a crucible of molten zinc at 450°C, during which a reaction occurs between zinc and steel resulting in different layers of alloy between the two metals, culminating in an external coating of pure zinc. To ensure proper application of the process, it is essential to subject the pieces to a preliminary process of degreasing, pickling, and fluxing.

Hardwood treated with LIGNUS: Wood from responsible forestry. Density greater than 930kg/m³, at 12% humidity, treated with a triple-layer LIGNUS coating, fungicide, insecticide, and water-repellent that provides protection against moisture penetration. Final finish with a layer of natural pigment in a satin finish, which provides additional protection against UV rays, the main cause of deterioration in this type of material.
