In **Ecatepec de Morelos,** very close to Mexico City, the **Parque Ecológico Lago de Texcoco** has been developed as one of the country's largest environmental, recreational and sports projects. **Designed to restore the former lacustrine environment and transform it into a green space accessible to millions of people,** the park integrates a wide network of facilities: **football and American-football fields, baseball fields and batting cages, multi-use courts, a skatepark, parkour circuits, a labyrinth, picnic areas, a bicycle-rental station, outdoor gyms and multiple rest and social spaces**.

Benito Urban has contributed to the equipment of this landmark project by installing **Kube chairs and bins, Petrus loungers and Lisa planters, all made of concrete,** a material that ensures high resistance and maximum durability in an intensive-use environment. Additionally, **Benito sports courts and Stark luminaires** have been incorporated, strengthening the park's activity offering and providing lighting suited to its needs. Thanks to these actions, the Parque Ecológico Lago de Texcoco is consolidated as a modern, ecological and fully equipped public space for sports, recreation and social integration.

Barcelona has completely renovated the Olympic Port, transforming it for the celebration of the America's Cup sailing event. After a long construction process, the facilities, originally inaugurated in 1991 for the Olympic Games, have been redesigned to offer more than 20,000 square meters of public space, creating a smoother connection between the city and the Mediterranean.
This project includes elements from **Benito Urban's Kube collection**, used to separate vehicle and pedestrian zones. These traffic barriers are robust and weather-resistant, designed to withstand the harsh conditions of coastal environments, making them an ideal choice for seaside areas. Additionally, **Kube litter bins** have been installed, sharing the same resistance and durability properties, ensuring high-quality urban furniture with low maintenance.
This project not only enhances the port's infrastructure but also offers citizens an open, modern, and accessible space.

In the town of Almoradí, Alicante, a turnkey renovation of the playground was carried out by Benito.

The project included the installation of various play elements made of **Robinia wood**, a durable and resistant material that ensures the safety and longevity of the installations. Among the equipment are **modular play sets, a swing, a carousel, and a seesaw**, providing a safe and fun space for children. To protect the little ones from vehicles, a wooden fence was installed.

Additionally, the ground was covered with soft rubber, reducing the risk of falls. The park also features urban furniture, such as **Volga benches**, ideal for family rest, and **Kube trash bins** with lids, promoting cleanliness and order. This renovation provides a more accessible, comfortable, and safe environment for the Almoradí community, significantly improving the quality of life in the area.

The project developed in the town of Almoradí (Alicante) opted to use **Robinia**, a wood renowned for its sustainability and resistance, to create a collection of games that would stand out for their solidity and durability. The choice of this wood not only ensures the longevity of the park's elements but also contributes to maintaining a natural and harmonious environment in the surroundings.
The collection of **Robinia** games is characterized by its seamless integration into the natural environment, thanks to a carefully designed layout that respects and enhances the beauty of the surrounding landscape. Each element blends organically with its surroundings, creating play spaces that invite exploration and enjoyment of nature.
In addition to their aesthetic appeal, **Robinia** games also offer exciting challenges for younger visitors, ranging from climbing structures to swings and slides.
As a complement to the park, **Kube litter bins** with hats and **Volga R benches** with backrests have been added, providing comfort and utility. These elements are constructed with concrete to ensure their durability.

Located in Tres Cantos, the **Entertainment Science Campus** of Planeta Training and Universities, the training division of Planeta Group, is the first campus of entertainment sciences of Europe.

This project was based on two premises: looking for efficiency in design as well as minimum consumption of energy and resources.

BENITO was the company chosen to supply the campus with street furniture. Aiming at combining innovative design and sustainable development, the products chosen were mainly made of low environmental impact materials such as concrete, wood and recycled plastic.

Among the installed products, the one that stands out the most are the semi-automatic bollards with a reflective strip to control the access of vehicles on campus.

Concrete benches and bons, wooden design benches and Ecosens bins made of ReBnew recycled plastic were also installed.

The El Llano square in Alcalá and the maritime promenade of Playa de San Juan have new benches and bins.

Guía de Isora is a municipality located in southwestern Tenerife. It presents a great natural wealth since a part of it belongs to the Corona Forestal Natural Park and another one to the Teide National Park.

It consists of 17 urban nuclei among which we can find Alcalá and San Juan, which already have new **BENITO benches and bins made of concrete**.

These products are resistant to high levels of salinity so they will increase the comfort of the inhabitants and tourists of El Llano square and the maritime promenade of Playa de San Juan.

This project is part of the recent renovation of street furniture carried out by Guía de Isora in the areas close to the coast.
