Recycled Rubber Wheel Stopper 1830
VBA28

Companies are improving the functionality and safety of their parking lots by **installing VBA28 parking stops and HFLEXP flexible bollards**, specifically designed to demarcate charging spaces for electric vehicles. A remarkable example of this trend can be found in Riudellots.

The **VBA28 parking stops**, made of recycled rubber, stand out for their resistance and sustainability. These elements are ideal for preventing collisions with walls and curbs, ensuring precise alignment and protecting both vehicles and facilities.

On the other hand, **the HFLEXP bollards**, made with flexible and durable materials, feature a design with a base that facilitates robust and secure installation. Their ability to absorb impacts minimizes damage in the event of collisions.

This project reflects companies' commitment to sustainability and their focus on innovative solutions that meet the needs of electric mobility and road safety.
